

Position - Developer

Job description:

The company Lanit Int has set up one of the offices in Italy (Lanit-Tercom Italy S.R.L) to expand its development team.

We are searching for the specialists to participate in the following projects:

- Develop the family of products for e-learning combining the high technical quality with the content, design, and educational principles that exist for the world premier publishing brand, McGraw-Hill, who has several thousand people producing, marketing and selling the products.

Technically, we have implemented our own functional programming language to do this as the exact same application has to run natively on Flash, iPad, iPhone, Android, Windows, Mac, Linux and HTML5.

The range of work spans from implementing user interfaces and products, working on optimizing compilers, designing and implementing new Domain Specific Languages to allow non-programmers to make products, picture manipulation/3d processing, layout engines and much more.

- Develop application for computer vision

The application is focus on pattern matching. Basic knowledge of computer vision (especially pattern recognition and texturing) and C++ programming are required

- Develop of software for control and remote management of industrial machines

The application is based on remote sensing and remote monitoring of machines and industrial plants. Knowledge of C#, WFC and .NET technologies are required

Working conditions:

- Work in professional international team
- Interesting tasks including research work
- Competitive level of salary
- Professional training programs
- Opportunity to work in a flexible schedule

Principal Duties and Responsibilities:

- Development of key system components
- Planning development tasks
- Regular coordination with the customer
- Taking in consideration different platforms features during development

Desired Skills and Experience:

- Knowledge of any of the following languages: C#, PHP, Python, Java, Delphi, Javascript, C++ and any other
- Experience in programming more than 3 years (not mandatory)

- Functional language knowledge is a big advantage (F#, LUA, Haskell, Scala etc.)
- English language
- Creative approach in development, the ability to find the effective and elegant solution for the technical tasks
